BUILD EARLY FOR GOOD GROWTH-6

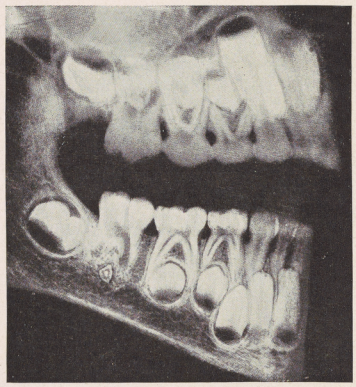

THE DEVELOPMENT OF THE TEETH ILLUSTRATED BY X RAYS OF THE JAWS

608-D

FOUR YEARS

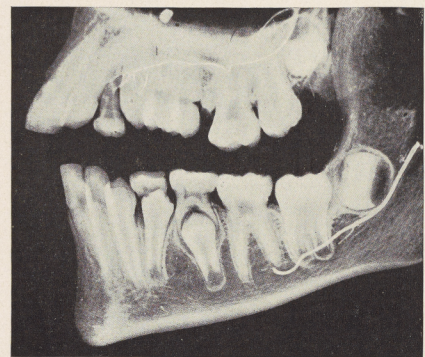

This child's bones showed indications of severe rickets. Note the numerous decayed teeth

609-D

SIX YEARS

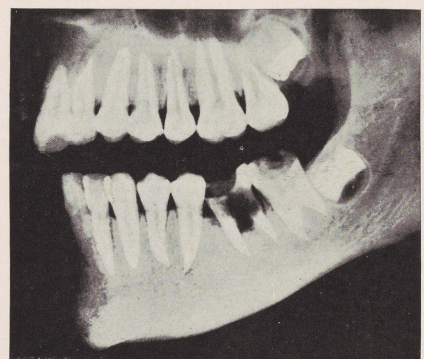

The temporary teeth are sound and meet well. The six-year molars are through. The rest of the permanent set, except the third molar, are already formed in jaw.

611-D

THIRTEEN YEARS

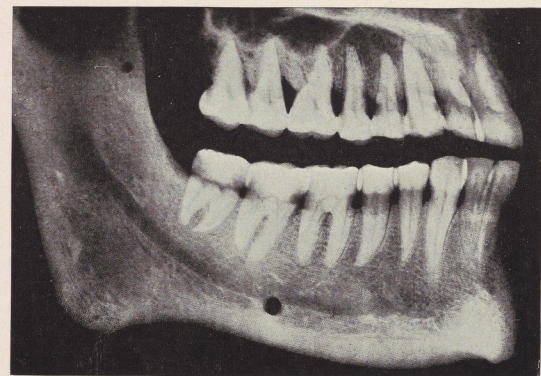

One temporary tooth, retained, is crowding the permanent teeth. The bicusps are pushing out the temporary molars. White lines show part of the blood supply.

611-D

SIXTEEN YEARS

The jaws have enlarged to make room for the third molars, which are forming. Note the badly decayed molar and the condition of the surrounding jawbone.

612-D

PERFECT ADULT MAN

These are evenly spaced and meet properly for tearing and grinding. The permanent teeth are solid, with small root cavities
